

## A Safe Drive

The application enables users to track their car speed and know if they are exceeding the legal speed limit on a particular road. The application does this by alerting the user with easy-to-read text and sound/vibration alerts. The application compares the user's driving speed using the iPhone's GPS data to the road's speed limit. The interface's display changes colors from green to yellow to red, informing the driver if there is a speed limit violation.
